

Statement of Purpose

“Believe in yourself and all that you are. Know that there is something inside you that is greater than any obstacle.” — Christian D. Larson

This quote has motivated me throughout my academic journey. Whenever I feel low, I read it and remind myself to keep moving forward. Initially, I was unsure about my career path, but my interest in computers and technology gradually helped me discover my passion for Artificial Intelligence and Machine Learning. This interest motivated me to pursue my undergraduate studies in Artificial Intelligence and Machine Learning in Engineering Technology at Malla Reddy University.

I have always been motivated to learn complex concepts, which has helped me remain consistent in academics. I achieved a 10 CGPA in my 10th standard and 97.4% in my 11th and 12th standards. My interest in mathematics, technology, and problem-solving encouraged me to pursue engineering in Artificial Intelligence and Machine Learning, where I maintained a CGPA of 7.98 out of 10.

During my undergraduate studies, I was interested in applying my knowledge to practical problems. I worked on projects such as **Pedestrian Detection** and **Liver Disease Prediction**, using technologies including Python, Machine Learning, Scikit-learn, Random Forest, and Flask. These projects improved my programming and machine learning skills and helped me understand the practical challenges of applying technical knowledge to real-world problems.

After completing my bachelor's degree, I secured an internship as a **Software Developer Intern at Grahmind Innovations Private Limited**, where I worked as a Full-Stack Web Developer Intern. I contributed to an Applicant Tracking System and Project Location. This experience helped me understand professional software development and further strengthened my technical and problem-solving skills.

Apart from academics, my extracurricular activities have also contributed to my development. I actively participated in university hackathons and was a finalist in one of them, which improved my teamwork and problem-solving skills. I also worked as a **Logistics Manager for one of the largest cultural events at my university**, where I managed and coordinated a large group of people, developing my leadership, communication, and organizational skills.

After these experiences, I now want to pursue a master's degree in Computer Science or a related field in Artificial Intelligence. My undergraduate studies have given me a strong foundation in AI and machine learning, while my internship provided practical software development experience. I am excited to explore advanced concepts in computer science, artificial intelligence, machine learning, and algorithms. I believe a graduate degree will strengthen my technical knowledge and prepare me for a successful career in technology.

I am particularly drawn to **LakeHead University** because of its strong academic environment, innovation, and opportunities to explore computer science and artificial intelligence. I look forward to learning from experienced faculty, collaborating with diverse students, and gaining the skills required to solve complex problems. I am confident that the program will provide the right environment for my academic and professional growth.

Thank you for considering my application.

Sincerely,

Goutham Reddy Nimmala
